

Human Error

[W]onderful, enlightened, and convincing beyond any reasonable expectations of what a science fiction novel should be. Greg BearCompugen has become a giant player in the tech field overnight by making genetically altered viruses into biochips that are replacing silicon chips as the brains of computers. Toby Bridgeman and Adrian Storey are an odd-couple of scientists?Toby, the programmer, and Adrian, the sloppy genius and genetic artist, have formed an enduring friendship and produced Epicell, a biochip so powerful that it will make all others on the market obsolete and save Compugen from financial disaster?if it can be rushed out fast enough. But Epicell, elemental living virus, is so awesome in its capabilities that tests have not yet established any limits to its multiplication or its computing sophistication. Adrian wants more testing?he believes that Epicell is potentially dangerous. Instead, it is rushed to market to save the failing company. Then those in contact with Epicell begin to come down with bad colds?the virus has spread outside computers, living and growing in the human body. Adrian, and perhaps the human race, are doomed unless Toby can reprogram the Epicell inside Adrian?and inside himself.

The NO view of human error. Human error has been the focus of much debate and many arguments for nearly 50 years. The term came to the fore during theThe speech errors were collected by observation which could lead to experimenter bias or human error. Latent human error is a term used in safety work and accident prevention, especially in aviation. Lonesome Georges death in 2012 marked the end of a long struggle for existence by giant tortoises against humans who had hunted and eaten them, and who - 5 min - Uploaded by NSF International In this video Martin Lush, Global Vice President of Pharma Biotech and Medical Devices, talks The human error problem can be viewed in two ways: the person approach and the system approach.
